ECF Case
No. 09 Civ. 8486(DC)

**DECLARATION OF
NICHOLAS
EGLESON**

NICHOLAS EGLESON declares under the penalty of perjury, pursuant to 28 U.S.C. §
1746, that the following is true and correct:

1. I am the founder and president of Paladin Consulting and Programming, which provides
IT consulting services to New York area health care, social service, and non-profit
agencies, and commercial clients. I submit this affidavit in further support of Plaintiffs'
Motion for Class Certification.
2. On July 27, 2011, I began analyzing a Microsoft Access database entitled "Process
Service Management System," which had been produced earlier that day. I understand

that this database is a record of all service of process performed by Samserv for Mel Harris and Associates, LLC, from January 2007 through January 2011.

3. Because I received the entire set of data on July 27, 2011, my analysis at this point is necessarily non-comprehensive. I believe there may be more data indicative of consistent, easily ascertainable trends that I have not yet been able to review.
4. The database contains 123,828 records of service, including 94,123 records of cases filed by Mel Harris in the New York City Civil Court. Of these records, 59,959 concern service of a summons and complaint in cases filed by Mel Harris on behalf of the Leucadia Defendants in New York City Civil Court.
5. For each record of service, the database contains a number of fields, including the name of the process server, his or her employee ID number, the date the process server was assigned to serve process, the method of service, the date and time of service, and, if applicable, the name and a description of the person served. The database also contains payment information for process servers.
6. For method of service, the database specifies the following methods of service: personal service, nail and mail, substitute service, corporate service, and several types of unsuccessful service.¹ In this affidavit I use the term “completed service” to mean instances in which a process server visited an address and effected service. “Attempted service” means instances in which a process server visited an address but did not effect service. “Visits” means all instances in which a process server went to an address,

¹“Unsuccessful service” includes the following categories: nonservice, bad address, moved, new address, not known at address, P.O. Box, no apartment number, deceased, miscellaneous, jurisdiction and “retd-per atty-not serv.”

whether or not service was effected. In other words, “visits” equals attempted plus completed services.

7. Six individual process servers (Assmat Abdelrahman, John Andino, Benjamin Lamb, Michael Mosquera, Angelo Rivera and James Stevens) accounted for 79% of all service performed by Samserv for Mel Harris in New York City between January 2007 and January 2011. Together, these individuals reported 74,446 services.
8. I was able to isolate several subsets of data by running queries in Microsoft Access, as well as by exporting the data into Microsoft SQL Server and Microsoft Excel.

Impossible and Highly Improbable Reports of Service

9. The data shows multiple instances of the same process server recording two or more services at different addresses at the same hour and minute – a physical impossibility. Twenty-three out of 25 servers who reported serving in New York City logged simultaneous visits at different addresses. Attached as Exhibit A is a table displaying the number of times each process server reported simultaneously being in at least two different locations in New York City at the same time.
10. For example, Defendant Mosquera claimed to be at four different locations on September 17, 2008 at 1 p.m., Defendant Lamb claimed to be in two different locations on November 28, 2007 at 6:59 p.m., and Defendant Andino claimed to be in nine different locations on March 29, 2007 at 4 p.m.
11. Overall, the data shows that Defendant Andino claimed to be in two or more places at the same time on 327 occasions, Defendant Mosquera on 124 occasions, and Defendant Lamb on 66 occasions.

12. Furthermore, in 2,915 instances, a process server claimed to have attempted or completed service *before* the date that the service was assigned to that process server – another physical impossibility.
13. Finally, each of the six most active process servers reported physically impossible travel times.
14. To determine actual travel time, I filtered the relevant data columns by server and date, sorted by time of visit, and ran a comparison with a driving route generated by Google Maps.
15. The data shows several instances where individual process servers reported making 40 to 100 visits in a day in less time than Google Maps estimates is required for the continuous drive time alone. The Google estimates assume a continuous driving route and do not include time for other activities, such as parking a vehicle, entering a building, serving legal papers, or updating a logbook.
16. The data also shows instances where process servers report having served papers in an order that required nonsensical backtracking along the route.
17. Attached as Exhibit B(1) through B(6) are tables displaying examples of simultaneous service, impossible travel times and nonsensical backtracking as reported by the six most active servers.
18. For example, Exhibit B(1) shows that on the morning of October 2, 2008, while serving defendants in Staten Island, Defendant Mosquera reported having completed 10 hours and 24 minutes of travel time in only two hours and five minutes. On that morning alone, Defendant Mosquera consistently backtracked among zip codes, and also reported four instances when he was in two different locations at the exact same time.

19. Exhibit B(2) shows that on December 8, 2007, while serving defendants in the Bronx, Defendant Lamb reported having completed 12 hours and 15 minutes of travel in seven hours and 10 minutes. On that day alone, Defendant Lamb consistently backtracked among zip codes and also reported 10 instances when he was in two different locations at the exact same time.
20. Exhibit B(3) shows that on October 15, 2007, while serving defendants in Brooklyn, process server James Stevens reported making visits almost exclusively within five-minute increments. A particularly odd entry shows that from 6:30 to 6:45 p.m., Mr. Stevens traveled to an address that according to Google Maps would take him 22 minutes, not 15. Mr. Stevens also reported making this same impossible trip in 15 minutes on two other dates for additional service attempts. Also on October 15, 2007, Mr. Stevens reported four instances when he was in two different locations at the exact same time, including one for which he reported simultaneous service attempts at the same two addresses on two other dates.
21. Exhibit B(4) shows that on December 15, 2007, while serving defendants in Brooklyn, process server Angelo Rivera reported having completed eight hours and 48 minutes of travel in six hours and 39 minutes. During that time period, Mr. Rivera reported a travel time of one minute for a distance that according to Google Maps would take 31 minutes to complete. On that day Mr. Rivera backtracked among zip codes repeatedly, and also reported three instances where he was in two different locations at the exact same time.
22. Exhibit B(5) shows that on January 28, 2008, while serving defendants in the Bronx, Defendant Andino reported having completed 16 hours and 57 minutes of travel time in five hours and 36 minutes. During that time period Defendant Andino backtracked

repeatedly among zip codes, and reported 10 instances where he was in two different places at the exact same time.

23. Exhibit B(6) shows that on October 6, 2008, process server Assmat Abdelrahman reported making service attempts in Brooklyn at 16 different addresses in the span of two hours and 23 minutes, despite the fact that the driving time alone among those locations would have taken three hours and 27 minutes. Mr. Abdelrahman reported consistently backtracking among zip codes throughout the day, in one instance claiming a space of one minute between services when the drive would have taken at least 21 minutes. He also reported an instance of being at two different addresses at the exact same time.

Methods and Volume of Service

24. The data shows that a strikingly small number of individuals performed most of the reported service. Six individual process servers (Assmat Abdelrahman, John Andino, Benjamin Lamb, Michael Mosquera, Angelo Rivera and James Stevens) accounted for 79% of all service performed by Samserv for Mel Harris in New York City between January 2007 and January 2011. Together, these individuals reported 74,446 services.
25. The six process servers reported high volumes of service, including hundreds of days on which they claimed to have made more than 40 visits in a single day. See table attached at Exhibit C.
26. The six process servers also reported widely divergent rates of personal, substitute, and nail and mail service. For example, Defendant Mosquera reported personal service in 1% of cases, substitute service in 88% of cases, and nail and mail in 8% of cases. Defendant Lamb reported personal service in 5% of cases, substitute service in 91% of cases, and almost never reported nail and mail service. Meanwhile, Defendant Andino

reported nail and mail service in 80% of cases. See tables and charts attached at Exhibit

D.

27. Overall, Samserv process servers in New York City reported effecting personal service in 3.5% of cases, substitute service in 69% of cases, and nail and mail service in 22.4% of cases.

Payment of Process Servers

28. Samserv's database contains information regarding payment rates, including whether or not a process server would be compensated for various service outcomes.
29. The database indicates that individual process servers were to be paid from \$6.50 to \$10 for each completed service, with the majority of the servers to be paid less than \$10 per completed service.
30. The database also indicates that process servers received no payment when they reported that the address was not valid, the defendant had moved, the defendant was at a new address, the defendant was not known at the service address, the service address was a post office box, or the service address lacked an apartment number.
31. In 95% of NYC Civil Court cases, process servers reported an outcome for which they would be paid.

AA-167

I declare under penalty of perjury that the foregoing is true and correct.

Dated: July 31, 2011
New York, New York

NICHOLAS EGLESON
